Waterways

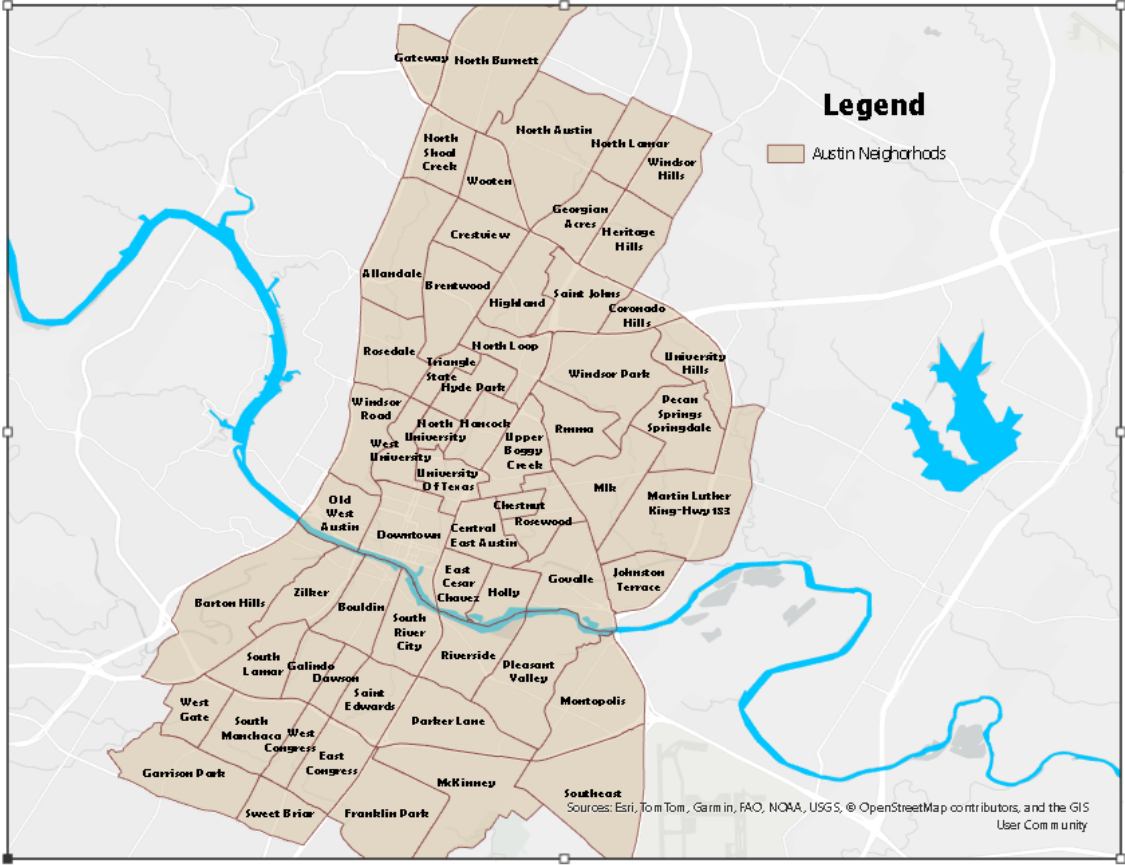

Buffer of 2 miles. Austin, Round Rock and Pflugerville are largest cities. Round Rock is within Buffer. Pflugerville is out of buffer. Water Proximity & Population: Mixed correlation observed. Areas outside buffer zone (Windemere, Serenada, Lost Creek) show population decline.

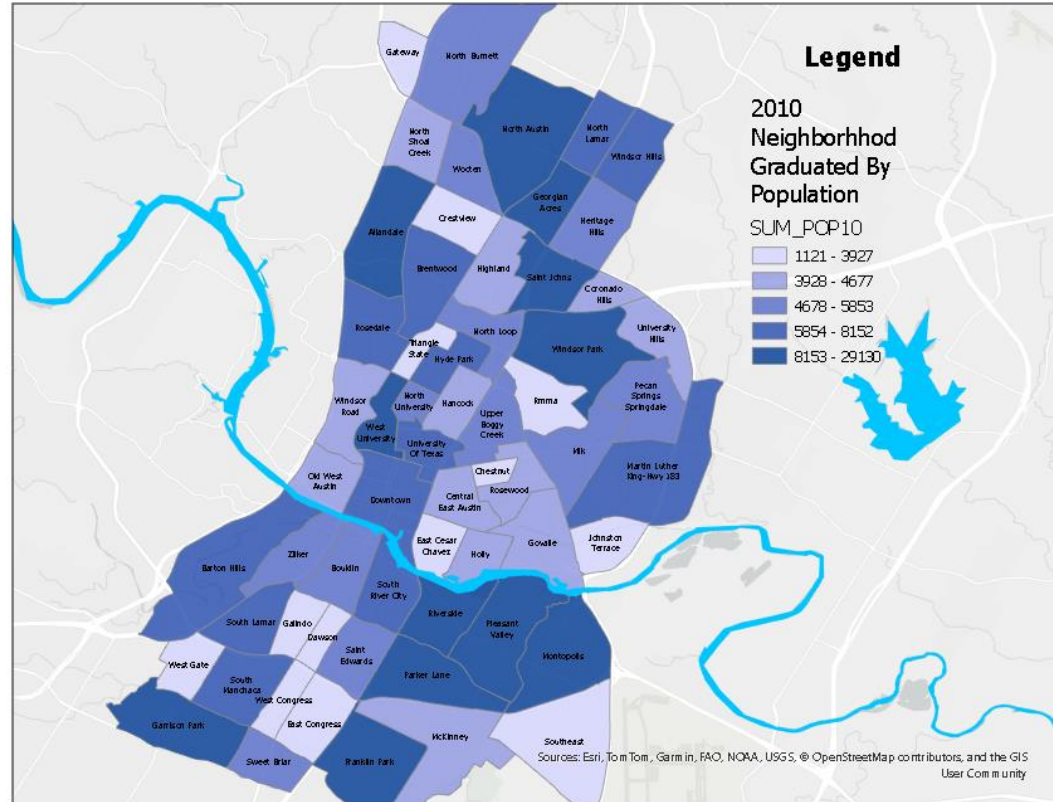

- Centralized Growth: Strong growth within buffer zone (Austin) and at the edge (Round Rock).
- Outlier: Pflugerville (outside buffer) contradicts water proximity theory.
- Conclusion: Water proximity isn't the sole driver of population change; other factors at play.

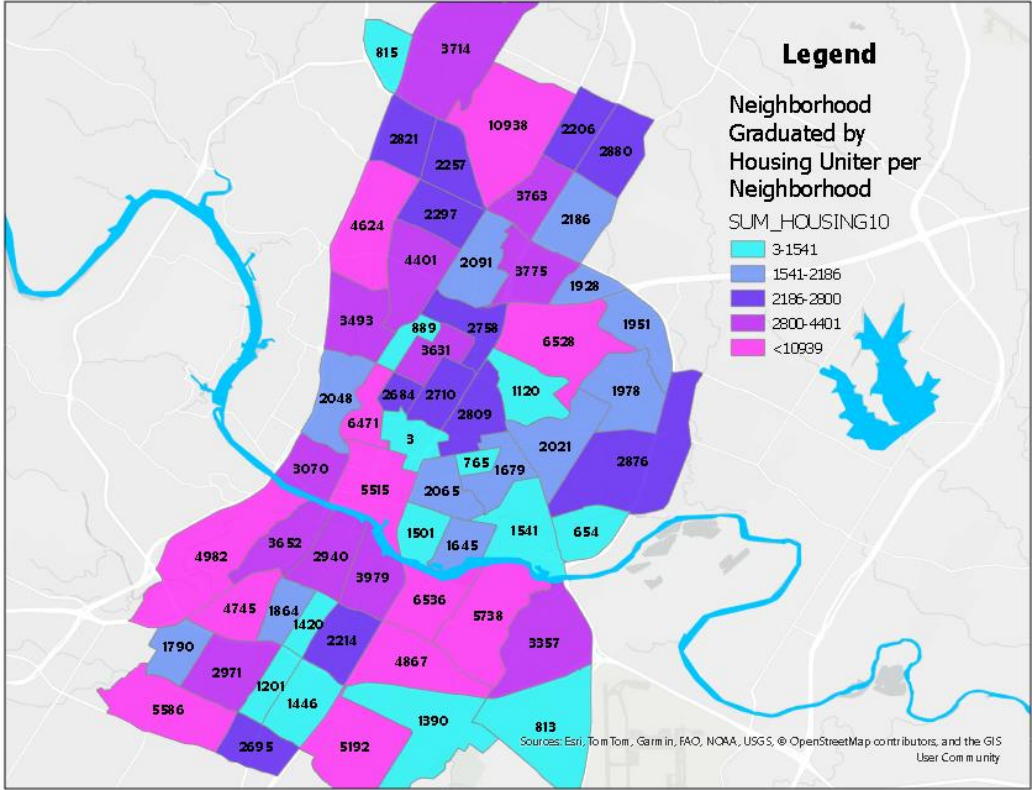

Austin with labeled neighborhoods

Neighborhoods by 2010 Population. SE of river is very populous. Near campus, near water and near downtown are densely populated.

Neighborhoods Graduated by Housing Units Per Neighborhood

Location of UT is centralized with the city of Austin. This shows the concentration of population and housing close to campus.
